There are a few well known ways of creating objects and using them as private namespaces but in this case this doesn't seem like a good way to do the job. JavaScript uses the idea of function scope to control variable visibility. Roughly speaking any variables declared in a function, anywhere in a function are local to that function.

Private Functions In JavaScript
Set shortly after World War II when rations are still in effect and butchers are living in fear of food inspectors, A Private Function is a comedy about some small town snobs trying to illegally fatten a pig for a celebration of the upcoming Royal wedding.
