What Is GD&T? ISO defines GD&T as “geometrical product specifications (GPS)—Geometrical tolerancing—Tolerancing of form, orientation, location and run-out.” In short, “geometrical product specifications” refer to the shape, size, and positional relationship of a product, while “tolerance” means the allowable error.

Geometric Dimensioning and Tolerancing (GD&T) is a system for defining and communicating engineering tolerances. It uses a symbolic language on 2D engineering drawings and 3D solid models that explicitly describes nominal geometry and its allowable variation. It tells the manufacturing technicians what degree of accuracy and precision is needed on each controlled feature of the part.
