While the TCP/IP protocol suite is the basis for all communications, VoIP and UC rely on communication and signaling protocols to establish a connection between two devices, and allow the transfer of audio or video data beyond the standard suite.

transport service for different signaling applications, which reside in the upper layer. The main part of the lower layer is the General Internet Signaling Transport (GIST) protocol [4]. Examples of upper layers (i.e., signaling applications) are QoS signaling, and firewall and NAT control. Furthermore, the working group decided
