2.3 Sine vibration test From document IEC 60068-2-6, table B.1 the category 'General purpose land-based and transport' was selected. According document IEC 60068-2-6 the sine vibration reference spectrum of the transformer is defined as: • From 10 – 60 Hz: ± 0.35 mm • From 60 – 500 Hz: 5 g

Vibration and Shock tests on a typical Current Transformer Set

IEC 60068-2-64 transit testing is applicable to specimens which may be subjected to vibration of a stochastic nature. This vibration can result from transportation or operational environments. For example, in aircraft, space vehicles and land vehicles. The methods and techniques in this standard are based on digital control of random vibration.

IEC 60068-2-64 Environmental Testing: Vibration IEC 60068-2-30 testing covers broadband random vibration testing intended for general application to components, equipment and other products, that may be subjected to vibrations of a stochastic nature. The methods and techniques in IEC-60068-2-30 are based on digital control of random vibration.

IEC 60068-2-64 | Keystone Compliance

IEC 60068 is an international standard for the environmental testing of electrotechnical products that is published by the International Electrotechnical Commission.. IEC 60068 is a collection of methods for environmental testing of electronic equipment and products to assess their ability to perform under environmental conditions including extreme cold and dry heat.
