Imaging technologies used in oncology. Perhaps the biggest growth area is fluorescence imaging, with various technologies being adapted for in vivo analysis. Indeed, because of developments in fluorescent imaging, researchers are now on the verge of being able to address some of the big questions in molecular oncology.

Imaging in the era of molecular oncology

In oncology there is by far the highest number of new drugs in development trajectories. Molecular imaging can give information about whole-body drug target presence, whole-body drug distribution, pharmacokinetic features, and pharmacodynamic effects.
