Social cognitive neuroscience is the scientific study of the biological processes underpinning social cognition. Specifically, it uses the tools of neuroscience to study "the mental mechanisms that create, frame, regulate, and respond to our experience of the social world". Social cognitive neuroscience uses the epistemological foundations of cognitive neuroscience, and is closely related to social neuroscience. Social cognitive neuroscience employs human neuroimaging, typically using functional

Social cognitive neuroscience - Wikipedia

In general, social neuroscience seeks to understand phenomena in terms of the complex interactions between social factors and their influence on behavior, the cognitive processes underlying behavior, and finally the neural and hormonal mechanisms subserving cognitive processes (see also Ochsner and Lieberman, 2001).
